1. Capture

What are the **inputs**? What are the different kinds of data?	Select button for flavours and toppings, and cont[...] button to submit
What do you need to **capture**?	Radio buttons or select buttons to capture customer data
What **validation** do you need?	To make the customer does not select more than one container for the same ice cream.

2. Process:

What data gets sent back to the server?	The type of ice cream flavour, container and topping
What happens to it to create the Output? What are the verbs?	~~Add the~~ Compare the user inputs and add the prices
What limits do you need to take into consideration?	You can't select more than one container for the same ice cream, can't have less tha[...] 5 containers
What else might be tricky?	Collecting ~~more~~ prices of more than one toppings for one ice cream

4. How to make it work?

What technical components do you need?	Factory functions & Tests, Handlebars, CSS, Express Routes, database knowledge and how to create tables
Which technical elements do you know already?	All of the mentioned above
What technical elements do you not know yet?	

3. Display:

What data gets re Turned? How many kinds of data?	The price of the ice cream, could also ~~tell~~ display on which counter to pay if you pay cash
Does anything else happen?	Can give you other options if ~~you~~ the ice cream is too expensive
