1. Restate: What am I being asked to do?
Create ice cream widget to calculate the cost of ice
cream depending on the toppings, flavours and container

What are the **verbs?** Compare the toppings, flavours add them
and get the price

2. Visualize:
Workflow: Inputs - Process - Outputs

Inputs	Process	Outputs
Select button Submit button	compare the input get add the input	Display the price

Prototypes (only as many screens as you need)

Flavour Chocol Vanil Straw Contain Plain Cak Sugare poperc Toppin Crumb ~~~ ~~~ ~~~ ~~~ ~~~ Get Price	You Price Is R 20.00 Please Pay at the Counter : 141	

What happens in each part of the screen?
There are 3 select There's a heading
buttons, one for flavour letling you your
1 for container and the price and where
other for the toppings. you should pay
Then a submit button
to get the price
